Summary: In this Collection, we would like to showcase integrated, systemic, and actionable research for sustainable urban transformation in line with the New European Bauhaus principles (Please refer to the research project “Advancing the New European Bauhaus: Sustainable Mobility and Resilient Urban Spaces for a Better Quality of Life” at [AdNEB](#)). We invite papers that (i) contribute to understanding intertwined environmental, social, and technical dynamics influencing the transformation of urban systems and (ii) reflect on strategies to govern these interlinked transitions toward more sustainability, livability, as well as health and well-being for all. This includes research on integrative and innovative conceptual or strategic approaches, on policy and planning instruments as well as the work of change agents throughout all levels of governance and society.

Keywords: Urban Resilience, Urban Health, Urban Sustainability Transformation, Climate Change Adaptation, Spatial Planning, Mobility, Nature Based Solutions, Retrofit, Resource Efficiency, Transdisciplinarity
